Six Successful Treatments

AIDS has really made being an sgo kid super hard. First we have to go through the REALIZATION that our sexuality is different from most of the other kids around us, and that if a lot of them found out, we'd be crunched. So we don't say anything, and that means a lonely life, feeling half a person because our way of loving isn't accepted and we can't share it. So we wait and wait and wait, hoping for the day that we can meet other sgos and possible lovers. Only, now, with AIDS, even being out and with other sgos, sex just may be the kiss of death. The night we loose our virginity may be the night we loose our lives, too!

All the fantasies of fun sexual acts have warning signs all over them. "Danger - this act may give you AIDS!" "Warning - anal intercourse is extremely risky!". It's bad enough that the adult world denies that we are sexual at all, now the terror of AIDS just may keep us virgins!!

But recently it has been coming more and more obvious that deliberate ignorance and repression of certain medical findings are the real enemies of our being able to be sexual and still be free from the AIDS terror. Why is ignoring and repression of these findings going on? Well, there are lots of reasons we can think of, and none of them nice at all. But for now, we want to share with our readers the real FACTS about AIDS and real, non harmful ways of reversing AIDS.

There ARE successful treatments of AIDS. Non-toxic, non drug-based - and they have been kept from the Amerikan public.

This statement comes from Gary Null, a health and nutrition expert and researcher. He lists SIX (6) treatments, and his research and studies are so deep and professional that his information just HAS to be shared. He says that the real cause of AIDS is NOT sex or sexuality, but "recreational" drugs and syphilis and continual abuse of the immune system and malnutrition. THEN comes the virus. Blood from 50 years ago, when thawed and tested, was found to have the AIDS antibody. AIDS is NOT a new virus. It may go back for years - centuries, even! It is syphilis, rot-

ten eating habits and abuse of your health, drugs (even NON-intravenous) that allow this virus to destroy you.

If any one in the Kerp Crew - in Project Truth/Free Will - ever tested positive with AIDS, we would seek one or more of these treatments first, before we would try anything else that the "regular" AMA medical community (and drug companies) say to try. And we are POSITIVE about this, like no tomorrow! Of the 6 possible treatments, we would pick the following three first.

The first treatment is "aqueous" penicillin. Not the "shot in the bum" type penicillin. That doesn't work. You would need an intravenous shot of water-based penicillin. This is what attacks the AIDS. This successful treatment was found by a Dr. Steven Kiasa (spelling is not sure). When AIDS patients are treated with this, their symptoms ALL go into remission and they live.

The second treatment is intravenous vitamin C. This treatment was found by Dr. Kafkart (spelling not sure), and it is another successful treatment. Persons with AIDS when treated with this become healthy again, like they do with the penicillin.

The third treatment is fatty acids. Dr. Revici, in New York, offers this treatment.

These treatments, and the other three, are not well known. In fact, trying to get information from the regular medical community will get you more scorn and total ignorance than anything else. If you want to specifically get one or more of these treatments, that will be hard to do, too. Try mentioning vitamin C therapy to your regular doctor. Chances are you will get sneers and asked "Who's the doctor, you or me?!"

But Mr. Null interviewed two groups of sgos. BOTH GROUPS WERE QUITE SEXUALLY ACTIVE. One group had tons of AIDS; the other, even allowing for those people who lie, had just about zip AIDS. It is life style, NOT "sex" style! The AIDS free sgos took care of their health, took vitamins, were vegetarians, non-smokers or drinkers or drug

users. They normally took care of themselves, took care of their immune systems.

So, protecting yourself from AIDS and other diseases is your responsibility, too. It means liking yourself, accepting yourself, wanting to be healthy inside and out and doing things to be healthy. It does NOT mean stopping sex! It means learning about nutrition and health, too. **AND SHARE WHAT YOU LEARN** with your mentor, your friends, your family, etc. Get them interested and active, and maybe the truth about AIDS can be told. Maybe there won't be any more of those horribly sad stories in the news about kids dying from AIDS - well, sick from AIDS and killed by ignorance and repression of treatment facts.

Project Truth/Free Will has tapes of an all day AIDS special in which Mr. Null talks in great detail about AIDS and the 6 alternative (and successful) treatments. We also have a tape of him on the Tony Brown Show, sort of a condensed, but powerful, version of the AIDS special. One of our mentors, in fact, was in his survey (in the healthy group). All of us in the Kerp Crew now feel more relief and more safe and secure than we have ever felt since the AIDS terror first started. Hopefully, when you listen to these tapes, you will feel the same - and if you have AIDS - please, do more than just listen!

For more information on obtaining the tapes, please drop us a line.

"GAMES"

Thanks to our readers, we received some news clippings about kids and AIDS. They came right during and after the Gary Null specials we talked about on page 1. We would like to reprint parts of them in Games to show you the terror we are being taught about AIDS, how it still is seen as a "gay disease" (only now an increasingly SGO youth disease), and how death, not alternative health programs and treatment, is still being given as the only end for people with the virus. PLEASE re-read our lead-in piece and give it serious thought and research, and if you can, share Mr. Null's findings with doctors, researchers, congress people, the press, etc.

Amerika is already going down in history as the most barbaric, criminally homophobic country in modern times because of its years of ignoring AIDS as long as the disease "stayed" in the SGO population. Don't let this evil attitude, ignorance and repression kill any more people, grownups or kids!

AIDS Adds to Turmoil of Gay Youths

Most sex education classes stress restraint as the best way to avoid AIDS. And even teachers who are explicit about heterosexual practices are unlikely to describe how to use a condom during anal intercourse.

At the Institute for the Protection of Gay and Lesbian Youth, on the other hand, sex education is innovative, explicit and integrated into regular activities rather than set apart like a health education class.

In a promiscuous population like these teen-age runaways, AIDS spreads like wildfire, as it did in certain segments of the

adult male homosexual population before the radical behavior changes of the last few years.

John is one of these homeless teen-agers. He says he is 18, but looks younger, and ran away from a group foster home after his blatant homosexuality made him a pariah. John lives in the Port Authority Bus Terminal — sleeping in a corner, eating fast food and hustling older men outside the lavatories on the second floor. "You don't think about AIDS," he said. "You think about money."

But the caseload rises significantly among young adults. There are more than 2,000 AIDS cases in the city among people between the ages of 20 and 29, and the majority are thought to have been infected as adolescents. Nationwide, nearly 8,000 teen-agers and young adults have AIDS, and officials expect the age of victims to drop.

"Breaths," sung by Sweet Honey in the Rock, an a cappella group:

Those who have died have never,
never left.
The dead are not under the earth.
They are in the rustling trees.
They are in the groaning woods.
They are in the crying grass.
They are in the moaning rocks.
The dead are not under the earth.

Under the worst circumstances, abused and rejected by their families and classmates, gay teen-agers become runaways. Some advocates for children say almost half the 10,000 homeless teen-agers on the streets of New York are homosexual, many of them working as prostitutes on the piers and in the darkest recesses of Times Square. Social workers say the men who buy their favors, and sometimes carry infection home to their wives, are seeking progressively younger partners in the hope they will

A diagnosis of acquired immune deficiency syndrome in a teen-ager is unusual because people infected with the virus may not show symptoms for many years. In New York City, 34 adolescents, age 13 to 19, have contracted the invariably fatal illness, more than half of them dead.

By JANE GROSS

One by one, the students at Harvey Milk High School dropped flowers in a wide-mouthed vase and said a prayer for the boy nicknamed Chelsea, one of the growing number of teen-agers who have died of AIDS.

The overwhelming majority of teen-agers and young adults with AIDS are males and most of those are homosexual, exposed through anal intercourse. In smaller numbers, teen-agers have contracted AIDS from transfusions, blood products administered to hemophiliacs and intravenous drug abuse. The risk to girls from lesbian sex is considered slight, but they can be exposed through the heterosexual sex that they sometimes seek to disguise their homosexuality.

Experts agree that the fear of AIDS will not convert a gay youngster to heterosexuality, although it might slow a decision to have intercourse.

"AIDS may act as a brake in some children, but not in the population as a whole," said Dr. Richard C. Friedman,

...but you won't like them!
